

Success Story: ORS group

ORS serves a wide range of TV and radio broadcasters using its specialized expertise and nationwide transmitter infrastructure. Its clients include ORF as well as nearly all private TV and radio broadcasters in Austria, along with international clients, mobile network operators, public authorities, and emergency services. Through its subsidiary ORS comm, the group also holds stakes in newer commercial ventures such as simpliTV and Flimmit.

Project Description — Corporate Digitalization

As part of its forward-looking digitalization strategy, ORS decided to prepare its organizational environment for the cloud. The goal was to map all business processes comprehensively within the agile world of cloud technologies. This also required building cloud expertise among participating employees through training and hands-on workshops. Support for developing cloud-native applications according to best practices — through joint planning and guided implementation — was also requested. By establishing an AWS Landing Zone, projects can be launched quickly and operated sustainably.

- Establishment of an AWS organizational environment for ORS as an enterprise
- AWS training for employees
- Support for the development of AWS projects

Migration of Multiple Web Services to the AWS Cloud

Multiple ORS Group web services needed to be migrated from self-managed servers to the cloud with minimal maintenance overhead. Compliance requirements of the ORS Group played a key role in this process. After migration, the websites were to be operated securely, reliably, and cost-effectively.

- Cloud architecture design
- AWS VPC (network) configuration
- Setup, customization, and testing of the web server environment for TYPO3
- Deployment automation via S3 & Lambda
- System hardening and optimization
- Creation of infrastructure templates (Infrastructure as Code)

Customer Contact:

Mag. Michael Wagenhofer, Kaufmännischer Geschäftsführer

"We have been in excellent hands with tecRacer (formerly KaWa commerce) for years. Their experience with cloud technologies and their ability to focus on what matters have won us over. Implementation works smoothly and reliably."

About tecRacer

tecRacer is on its way to becoming Europe's leading AWS Thought Leader. Working closely with AWS, tecRacer helps organizations leverage cloud innovation, generative AI, and digital sovereignty as competitive advantages — without compromising on security or regulatory responsibility.

Founded in 2006, the company employs around 120 people across Germany, Austria, and Switzerland. As an AWS Premier Tier Services Partner and Advanced Tier Training Partner, tecRacer guides organizations from their first cloud idea through to 24/7 operation of their cloud environments.
